

# RAVEN RCM

## RATE CONTROL MODULE

The Raven Rate Control Module (RCM) is your solution for every season. The RCM is an ISOBUS product controller that can control up to five products in one ECU for both liquid and dry applications.

## RAVEN RATE CONTROLE MODULE

In an ag industry where weed resistance has become a real and growing problem, product efficacy is more important than ever before. Meeting and exceeding these expectations requires the latest in application control technology to maximize the efficiency of the product being applied. Retailers, growers, and custom applicators continue to demand greater application control precision, with the flexibility to be compatible with many pieces of equipment.

The RCM fits a variety of applications - up to five product liquid and granular control, NH<sub>3</sub> (including AccuFlow™ HP+), air cart and generic applicators. Sixteen-section control eliminates expensive skips and overlaps for all phases of your operation, from spraying to NH<sub>3</sub>, and fertilizer application to planting.

The RCM is compatible with many ISOBUS virtual terminals on the market, including the Viper® 4 and Viper® 4+ from Raven.

### FEATURES AND BENEFITS

- Liquid Applications NH<sub>3</sub> product control
  - Liquid product control
  - Section control up to 16 sections
  - Control of up to four Direct Injection ICD pumps
  - Tank fill monitoring
- Dry Applications
  - Spreader and air cart profile
  - Control up to four product applications and 16 planter sections
- Intuitive user interface and diagnostic features
- Certified worldwide with regulatory marks for CE, RCM, IC, FCC, E-Mark, CNC Mark, ANATEL, ICASA, Ukr-sepro, and SRRC
- IP67 environmental rating for the harshest of environmental conditions
